

**ABSTRACT OF THE DISCLOSURE**

5 A disc toy for throwing between at least two persons includes a disc  
with a panel and a flange. The panel has a top surface, a bottom surface  
and a peripheral edge having a substantially circular shape. A flange is  
integrally attached to and extends downwardly from the peripheral edge.  
A plurality of windows is positioned in the disc for allowing light to pass  
through the disc. Each of the windows is positioned at a juncture of the  
10 panel and the flange and the peripheral edge. A plurality of light emitters  
is provided. Each of a plurality of clip members is attached to the disc at  
a juncture of the bottom surface and the flange. Each of the clip members  
abuts one of the windows and each is adapted for releasably securing one  
of the light emitters in a position adjacent to one of the windows.
